Course Objectives:

- discuss conservative treatments providing adhesive restorations.
- discuss the use of conventional crowns and bridges.
- discuss the role of dental implants
- discuss the use of overlay, onlay and over dentures.
- discuss what factors influence the decision-making process.
- understand the limitations of implants
- identify prosthetic options to overcome problems

Learning Outcomes:

At the end of the lecture participants will know what treatment options exist for patients with tooth wear and missing teeth and be able to select the most appropriate option to manage their own patients.
